HARDWALL BUILDING SYSTEMS

NUCOR

Building Systems Group provides a multitude of choices in design and treatment of hardwall building systems.

Choices of exterior wall materials are governed by many factors including cost, compatibility with structural systems, and functional as well as aesthetic objectives.

Nucor buildings can be incorporated into a variety of projects including retail centers, churches, community centers, grocery stores, automobile dealerships, recreational facilities and warehouses. Nucor can easily accommodate any practical floor plan your business may require. Your needs become our standard.

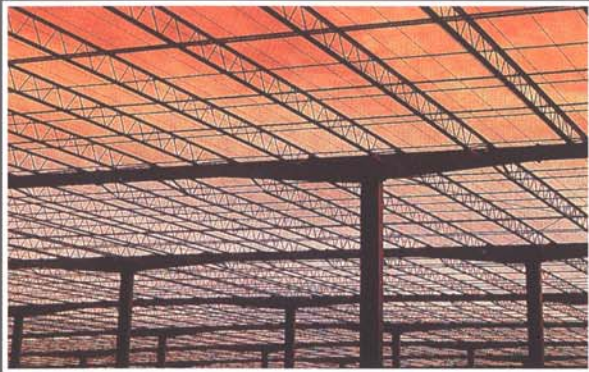

NUCOR

Nucor structural systems are designed to accommodate attractive wall profiles including curves, skews and textures.

Your Nucor builder can offer literally thousands of exterior finish treatments that are compatible with Nucor buildings, offering design characteristics ranging from the most basic utility structures to highly sophisticated combinations of size, color, shape and texture.

Smooth visual transition between office and warehouse areas in an industrial facility

NUCOR

Industrial applications can be attractive with hardwall finishes. These alternative wall systems also allow a smooth visual transition between office areas and manufacturing or warehouse areas.

You have complete freedom of design with Nucor. Your project architect or engineer can specify a Nucor Classic Roof™, Nucor CFR™, Nucor Composite CFR™, or a wide range of single ply or other conventional roof systems.

NUCOR

Your design professional has the freedom to design wall panels with attractive profiles, curves, textures and colors. The aesthetic appeal may be accomplished with a distinctive facade of wood, brick, stone, glass, metal, and more.

In many applications, it's desirable to use specific types of exterior wall systems for aesthetics, security, sound resistance, fire resistance or other reasons. Your contractor can incorporate many low maintenance colors and textures that echo your desired company image.

Limitless design options

NUCOR

Nucor has the ability to work with your architect and engineer to combine the metal building system with the hardwall system. The building can be supported by the concrete wall without the aid of steel perimeter columns. Interior columns can be held to an absolute minimum depending upon your budget and design.

By eliminating the exterior columns, the "usable" space is increased and the total project cost may be reduced.

Excellence from the ground up

S_{olutions That Work}

Nucor buildings are designed by registered professional engineers with the aid of some of the industry's most advanced computer systems; all in accordance with the loads and codes specified by your project architect or engineer of record.

Our computer designed system simplifies construction and significantly reduces erection time. This means lower "in-place costs" as well as quicker occupancy of the building.

Ask your Nucor Builder about features designed to save you time and money.
